

Grease Trap Meister

Equipment + bioformulation + operating conditions

AR SALES GUIDE

COMMERCIAL CONDITIONS

MEISTER-led overseas installation is generally planned from 50 units. Local installation allows equipment supply from one unit.

100 V POWER

The customer provides a suitable transformer and confirms local voltage, frequency, grounding and electrical safety.

BIOFORMULATION

Large-container supply after consultation. Five-fold dilution is an initial reference and must be adjusted to site conditions.

SEPARATE APPLICATION

This kitchen grease-management system is unrelated to dioxin or PCB treatment and must not be represented as a soil-remediation product.

IMPORTANT

Results vary with grease load, detergents, temperature, tank design, aeration, operating time and maintenance. This system does not replace legally required inspection, cleaning or waste handling.
